

## Worldwide repairs carried out with PolymerMetall®

REP-# 176

For a long time MultiMetall's repair technology is used successfully in the energy sector for the elimination of various types of damages. Because of the advantages of the polymer metallic materials against conventional welding procedures particularly MM-metal oL-steelceramic is well-established for the repair of leaky transformers at notable transformer producers, operators and service companies. For metal specific problems and plenty damage variants in the energy sector MultiMetall offers a customised solution on a polymer-metallic basis.

Further information about this field of application can be found here:
